

Manual cash drawer for stand-alone applications

The Jarltech 8045 is a cash drawer for manual operation. It offers much functionality and a long service life at a very low price. It is suitable for all applications that do not provide automatic opening of the drawer. It is opened like a normal drawer by a gently push against the front. The drawer locks into place in the same way, when closing it. Naturally, the drawer is equipped with a 3-step lock so that it also can be left unattended. This makes the drawer the ideal choice for hotels, practices, market stand and many other applications.

This manual model is also equipped with a soft-opening mechanism that opens and closes the drawer extremely

smoothly. Ball bearing steel rails make sure that the drawer still runs smoothly even after opening the drawer hundreds of thousands times.

A form factor of 420 x 420 x 91 mm allows an even distribution of five horizontal bank note compartments, one cheque compartment and nine coin compartments that can be adjusted freely. Compartments and separators for coins and notes can be removed individually from the drawer.

The cash drawer is available in black with scratch-resistant stainless steel front.
