

Cash Drawer Jarltech 8070

Multi-Currency Steel Cash Drawer in black or white

The Jarltech 8070 is our proven cash drawer with professional features. It combines high functionality and long life at a very cost-effective price. The Jarltech 8070 is available in black or white. This means it is suitable for almost all applications where cash is used.

This model is equipped with a soft-opening mechanism that opens and closes the drawer extremely smoothly. Ball bearing steel rails make sure that the drawer still runs smoothly even after opening the drawer hundreds of thousands times. Its eight coin compartments can be adjusted in size and of course its bank note compartments are Euro compatible.

The standard Jarltech 8070 drawer has two horizontal and four vertical bank note compartments. If you require the drawer for other applications, you can find various conversion kits in the accessories list. Compartments

and separators for coins and notes can be removed individually from the drawer, and the optional lockable cover makes cashier changes just a matter of seconds. If additional compartments are required, please order separately.

The drawer features a scratch-resistant front surface and a lock. An emergency opening mechanism is located at the bottom side of the drawer.

Not unlike other POS systems, this cash register drawer is also connected to the cash desk printer. Consequently, the 8070 features a standard Epson cash desk printer interface, like it is used by almost all manufacturers for cash desk printers. If your customer does not require a receipt printer, you can use our external Jarltech 8005 cash register opener. It triggers a relay over the serial or USB interface to send an opening pulse to the cash drawer.
